PROFESSIONAL SUMMARY

Software Engineer with 4+ years of industry experience building and operating resilient, high-scale distributed systems using Java, Spring Boot, Python, and React. Strong background in trust-critical systems, API design, data pipelines, and observability for 24x7 production environments.

EXPERIENCE

SOFTWARE ENGINEER (Freelance)

Dec 2025 — Present

Alignerr

- Evaluate AI-generated backend and full-stack solutions using real-world software engineering standards focused on correctness, safety, scalability, and maintainability.
- Review Python backend logic, API behavior, error handling, and data flows to identify failure modes relevant to trust-sensitive systems.
- Assess front-end-facing behavior, including state assumptions, data consistency, and integration boundaries that impact user trust and system reliability.
- Compare multiple implementations and select solutions based on trade-offs in performance, scalability, and risk exposure.
- Write and validate prompts simulating real-world attack vectors, edge cases, and misuse scenarios, improving robustness of AI-driven systems.
- Apply structured reasoning around system failures, ambiguous inputs, and adversarial behavior, closely aligned with Trust & Risk engineering principles.

PROGRAMMER ANALYST (FULL-STACK ENGINEER)

August 2022—Oct 2025

Cognizant

- Designed, built, and operated distributed backend services using Java and Spring Boot, supporting high-traffic internal platforms with strict reliability requirements.
- Implemented well-designed APIs, data models, and service boundaries to reduce fraud-like failure patterns such as inconsistent state, duplicated actions, and unauthorized access paths.
- Built end-to-end product features across backend services and React-based UIs, ensuring correctness from request ingestion to user-visible outcomes.
- Strengthened platform resilience and fault tolerance using observability-first practices (logs, metrics, tracing) to detect anomalies and prevent customer impact.
- Investigated and resolved high-severity production incidents involving data inconsistencies, API failures, and performance degradation.
- Worked closely with product, operations, and QA to refine requirements, prioritize risk-heavy workflows, and validate behavior in edge cases.
- Used AI tools (Claude, GitHub Copilot) to assist with debugging, test generation, and verification of fixes in time-sensitive incidents.

PROGRAMMER ANALYST TRAINEE

Jan 2022—July 2022

Cognizant

- Completed intensive training in Java, data structures, and distributed system fundamentals.
- Built full-stack applications using Spring Boot and React, emphasizing input validation, predictable behavior, and testability.
- Developed features with a focus on correctness, defensive coding, and clear failure of handling.

PROJECTS - (Enterprise Client Engagements)

Macys ~ Full Stack Engineer Jul 2025— Oct 2025

- Built production-grade UI components for large-scale POS systems with strict correctness and performance requirements.
- Investigated data mismatches and latency issues by analyzing SQL queries and transactional flows.
- Collaborated with product and QA to ship stable, trust-critical releases under tight timelines.

DIRECTV ~ Full Stack + DevOps Engineer Nov 2023— Jun 2025

- Designed and operated high-availability Spring Boot + React services consumed by multiple internal teams.
- Debugged distributed production issues using logs, metrics, and tracing across services and databases.
- Improved system reliability by refining API contracts and integration boundaries.

LN Payments ~ Full Stack Engineer Aug 2022— Oct 2023

- Built UI and backend services for a payments platform, a trust-sensitive domain requiring correctness and consistency.
- Implemented asynchronous workflows and background jobs using SpringBoot.
- Ensured data integrity across transactional systems and internal tooling.

EDUCATION

Bachelor of Engineering in Computer Science & Engineering Aug 2018 – May 2022
Chitkara University - Rajpura • Vice Captain of football team • 8.68/10

SKILLS

Languages: Java, Python, JavaScript
Backend & Distributed Systems: Spring Boot, REST APIs, API versioning, Microservices, JWT, Data Pipelines
Frontend: React, Next.js, Angular, HTML, CSS, Tailwind
Databases: PostgreSQL, MySQL, MongoDB, SQL performance tuning
Observability & Reliability: Logs, Metrics, Distributed Tracing, Dynatrace, Incident Debugging
Cloud & DevOps: AWS, Docker, Kubernetes, GitHub Actions, Jenkins, Terraform
AI & Tooling: LLM evaluation, Prompt design, Claude, GitHub Copilot
Collaboration: Cross-functional delivery, documentation, incident response

CERTIFICATIONS

- AWS Cloud Practitioner - Foundational
- AWS Certified Developer - Associate
- AWS Certified AI Practitioner
- GitHub Copilot Certification
